

Program Director, Columbia University Center for Motor Neuron Biology and Disease

The Motor Neuron Center (MNC) is an innovative new collaborative center launched in November 2005. It brings together over 40 labs (scientists and clinicians) working on motor neuron biology and disease (ALS and SMA). We are looking for a dynamic Program Director to develop and catalyze scientific collaborations within the center and externally, and to oversee administration, meetings, faculty recruitment, grant programs, and fundraising.

Requirements: Graduate level education, 2+ years' experience in program management or equivalent for a foundation, government organization, academic institution or corporation. Demonstrated project management skills and ability to work with scientists and donors.
